
**Presentation by CMP of the new anti-fouling paint
“SEAFLO NEO-S PREMIUM”
for outfitting period at new shipbuilding in Korea**

In March 2015, CMP held a presentation on the anti-fouling paint “SEAFLO NEO-S PREMIUM”, a valuable protection paint against barnacle fouling for outfitting period at new building.

The “SEAFLO NEO-S PREMIUM” is developed based on new biocide technology and contains “Selektope®” (I-Tech AB/Sweden), an effective anti-barnacle biocide.

The new biocide will be authorized under “BPR” (Biocidal Product Regulation) in EU.

The “SEAFLO NEO-S PREMIUM” is proven to exercise its excellent anti-fouling performance even in very high risk fouling ocean area, thus work successfully as an anti-fouling paint for outfitting period at new shipbuilding in Korea where it faces with severe fouling environment.

SEAFLO NEO-S PREMIUM

Special AF for outfitting period

Unrivalled anti-barnacle performance
New Biocide Technology

The SEAFLO NEO-S PREMIUM contains New biocide “Selektope®” and shows excellent anti-barnacle performance. It is an effective countermeasure to avoid heavy barnacle fouling in high fouling risk area, such as outfitting period anti-fouling at new building in Korea, etc.

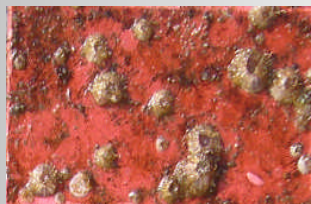

Low activity Vessel in Tokyo Bay * (12 months)

(*) Tokyo bay is very high risk fouling area.
